

Comparing Single-Agent and Multi-Agent LLM Architectures for Code Generation on HumanEval

Anonymous ACL submission

Abstract

1 Introduction

1.1 Research Questions

2 Background

3 System Overview

3.1 Dataset

3.2 Architecture Overview

3.3 Agent Roles

3.4 Model Configuration

3.5 Prompt Repetition Technique

3.6 Escalation Policy

4 Experimental Results

4.1 Experimental Setup

4.2 Primary Metrics

4.3 RQ1: Single-Agent vs Multi-Agent

4.4 RQ2: Single-Model vs Multi-Model

4.5 RQ3: Adaptive Routing

4.6 RQ4: Prompt Repetition Effect

4.7 Static Code Quality Analysis

5 Conclusion

A Appendix
